CORE SKILLS

- JavaScript, TypeScript, Python
- React, Next.js, Django
- FastAPI, REST APIs
- PostgreSQL, MongoDB
- Git, Docker, Vercel
- HTML, CSS, Tailwind

EDUCATION

B.Tech, Computer Science
Visvesvaraya Technological
University
2022

CERTIFICATIONS

Meta Front-End Developer
Certificate
2023
Postman API Fundamentals
Student Expert
2024

LANGUAGES

English — Professional
Malayalam — Native
Hindi — Conversational

INTERESTS

Developer tools, product
engineering, design systems, API
integration

PROFILE

Software engineer with 2 years of experience building web products, mostly on the frontend, with growing responsibility on backend services. Experienced with React and TypeScript and comfortable working with Python APIs, PostgreSQL and Docker. Looking for a product engineering role where I can work across the application rather than only one layer.

WORK EXPERIENCE

Software Engineer | BrightCart Technologies | Bengaluru | Aug 2024 – Present

- Develop customer-facing React and Next.js features for an e-commerce platform, including checkout, order history and account settings.
- Work with backend engineers to define API payloads, troubleshoot REST integration issues and review endpoint changes.
- Built a small Python/FastAPI service for an internal product-catalog workflow and connected it to PostgreSQL.
- Added client-side validation, error handling and loading states for workflows used by operations teams.
- Use GitHub pull requests, code reviews and CI checks as part of the regular development process.

Junior Web Developer | PixelMint Studio | Kochi | Jul 2022 – Jul 2024

- Built responsive websites and internal dashboards using React, JavaScript, HTML and CSS.
- Integrated third-party REST APIs for payments, maps and customer notifications.
- Created Django admin modules for a small service-management application and worked with PostgreSQL during development.
- Fixed production UI issues, investigated API failures and worked directly with clients to reproduce problems.

SELECTED PROJECTS

Meal Subscription Platform | React · FastAPI · PostgreSQL · Docker

- Built a personal project for managing meal plans, subscriptions and delivery preferences. Implemented JWT authentication, PostgreSQL persistence and a FastAPI backend consumed by a React frontend.

Freelancer Invoice Tracker | Next.js · Django · PostgreSQL

- Created a small application for tracking clients, invoices, payment status and monthly revenue. Added filtering, export and a simple dashboard.

API Monitoring Dashboard | React · Python · REST APIs

- Built a lightweight dashboard that checks configured endpoints and records response status and latency for development projects.

ADDITIONAL EXPERIENCE

Freelance Web Developer | 2023 – 2024

Built and maintained small websites and internal tools for local businesses. Worked on requirements, implementation, deployment and post-launch fixes.

TOOLS & WORKING STYLE

Comfortable with Git-based workflows, REST API testing in Postman, Docker-based local environments and basic CI pipelines. Enjoys working with product and design teams and translating unclear requirements into small, testable features.
